YOUSSEF ATIA

Software Engineer — Backend · iOS · Full-Stack | Seeking a Software Engineering Internship

Cairo, Egypt · +20 109 850 4605 · youssefatiav@gmail.com · youssef-atia.vercel.app · github.com/YoussefAtia17

SUMMARY

Third-year Computer Science student (GPA 3.48/4.0) who ships software for paying clients. A back-office system I built alone is live and used every day by a luxury-watch business's team.

- **Backend:** PostgreSQL / Supabase (row-level security, triggers, migrations), Flask REST APIs, TypeScript Edge Functions
- **Mobile & web:** Swift / SwiftUI, Flutter, JavaScript
- **Leadership:** Head of Technical at the university's ICPC community; teaches algorithms and data structures

EXPERIENCE

Freelance Software Engineer — Self-employed, Cairo Sep 2026 – Present

Clients: Aser Watch (2 systems) and a PlayStation gaming café (1 system). Each built end-to-end, alone.

MRC — Deals & Treasury Back-Office · Aser Watch · **Live, in daily use** Sep 2026 – Present

JavaScript, Tailwind, Supabase/PostgreSQL

- Built the internal system the client's staff runs on daily: customer deals with WhatsApp reminders, employees and payroll, salary advances and bonuses.
- Designed a locked treasury with daily and monthly closing, so past periods can't be changed after close.
- Secured accounts with bcrypt password hashing and server-side session tokens.

Royal Palace — iOS Marketplace for Pre-Owned Swiss Watches · Aser Watch Oct 2026 – Present

Swift, SwiftUI, Supabase/PostgreSQL, TypeScript

- Building a native iOS app with structured listings, an admin review queue, real-time chat with price offers, and Arabic/English search.
- Enforced access control in the database with row-level security and column privileges. Business rules run as Postgres functions and triggers across 12 versioned SQL migrations.
- Delivered push notifications through a database outbox and a TypeScript Edge Function to Apple Push, with automatic retry for stuck sends.

PlayZone — Gaming Café POS · PlayStation café Nov 2026

JavaScript

- Built a cashier and management system: live per-device timers with hourly billing, orders and takeaway with automatic stock deduction, printable receipts, and daily/monthly profit reports.

Head of Technical — ICPC ECU Community, Egyptian Chinese University Oct 2025 – Present

- Teach problem-solving sessions on algorithms and data structures, and follow up one-on-one with students on problems they get stuck on.
- Also: Assistant Tutor at iSchool (2-week placement, Jul 2026). Ran hands-on practice and helped students when they got stuck.

PROJECTS

Splitter — AI Bill-Splitting App · Team Lead · Flutter, Supabase, n8n May 2026

- Led the team and built most of the Flutter app. AI OCR reads a receipt, tax and service are split by what each person ordered, and group debts settle in the fewest transfers. n8n sends payment reminders.

Eventive — Event & RSVP Platform · eventive-steel.vercel.app · Python (Flask), Supabase, JavaScript Sep 2026

- Built a Flask REST API (events, RSVPs, admin endpoints) with a JavaScript frontend and admin dashboard, deployed on Vercel.

University team projects Feb – Apr 2025

- **Smart Home (AI & IoT):** owned the backend and database of a Raspberry Pi/Arduino smart home with face recognition and an n8n voice assistant.
- **MoneyPhi:** built the backend and calculation logic of a Gemini-powered expense tracker.

SKILLS

- **Languages:** Python, JavaScript, TypeScript, Swift, Dart, C++, SQL
- **Backend & data:** PostgreSQL (RLS, functions, triggers, migrations), Supabase, Edge Functions, REST APIs (Flask), MySQL, Firebase
- **Frameworks:** SwiftUI, Flutter, Tailwind · **CS fundamentals:** Data structures & algorithms, OOP
- **Tools:** Git & GitHub, Vercel, n8n, Gemini API, Raspberry Pi, Arduino · **Currently learning:** Node.js

EDUCATION

B.Sc. Computer Science — Egyptian Chinese University (ECU), Cairo · GPA 3.48 / 4.0 Expected Aug 2028

Certificates: OOP & Data Structures (Programming Advices) · Data Management and Analysis (Huawei) | Languages: Arabic (native) · English (intermediate)
